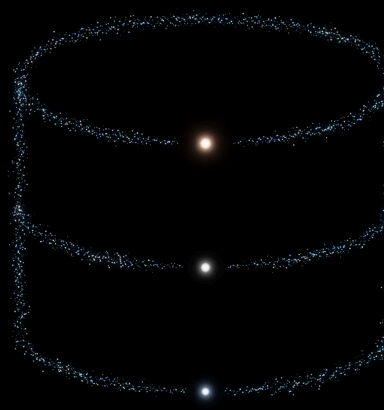
ETHEON



# Knowledge assistant on Amazon Bedrock. Answers your staff can check, with their sources cited.

| Prove | Production | Run and improve |
|---|---|---|
| 3 weeks | 8 to 12 weeks | monthly, 40 hours |
| $20,000 | from $50,000 | from $5,000 |

## How it works. Stage by stage.

**Prove, 3 weeks, $20,000. Week 1:** we choose a first set of documents and the questions that matter to your staff. Week 2: we build the assistant and its retrieval over those documents. Week 3: we run the seven release gates and write the evaluation report and the running-cost projection.

**Production, 8 to 12 weeks, from $50,000:** the assistant live for your staff, released in stages, each with a rollback.

**Run and improve, from $5,000 a month:** 40 hours a month of monitoring and improvement.

## What you receive. Stage by stage.

**Prove:** working software, the code in your repository, test results, an evaluation report and the projected monthly running cost.

**Production:** product design, architecture document, release plan, working software, evaluation report, release notes, runbook and handover docs.

**Run and improve:** a usage report and the next release plan, each month.

## Seven release gates. Passed before every release.

Task quality · Grounding · Safety · Privacy · Latency · Cost · Drift

## On AWS. The services we use.

Amazon Bedrock for the models and retrieval, with your documents and data on Amazon S3 and Amazon RDS and the application on AWS Lambda or Amazon EKS.

## Your data. Yours to keep.

We never train models on your data without your opt-in. Your data stays isolated from other clients. The assistant and its code are in your repository, and the models and the accounts are yours.

## Getting started. A reply within one business day.

Request a private offer on AWS Marketplace, or write to hello@etheon.com or call +1 (415) 413-3959. A partner reads every brief, not a form queue.

The work runs in your own AWS account. If you incur additional AWS infrastructure costs, separate from your AWS Marketplace transaction, you are responsible for paying those infrastructure charges.
