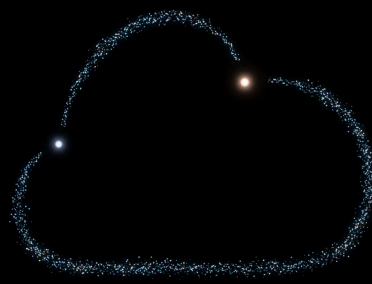
ETHEON

Agent platform proof of concept. The harness in your AWS account, with a first agent at work.



Proof of concept
4 weeks
$25,000

Foundation
next, production
from $60,000

How it works. Stage by stage.

Week 1: we choose the workflow, the tools the agent may call and its limits.

Weeks 2 and 3: we build the harness and the agent, with logging and replay.

Week 4: we run the gates as automated evaluations and write the evaluation report and the running-cost projection.

What you receive. Stage by stage.

- Working software
- The code in your repository
- Test results
- Evaluation report
- The projected monthly running cost

Seven release gates. Passed before every release.

Task quality · Grounding · Safety · Privacy · Latency · Cost · Drift

On AWS. The services we use.

Amazon Bedrock for the models, Amazon EKS and AWS Lambda for the harness and the agent's tools, Amazon S3 and Amazon RDS for logs and data.

Your data. Yours to keep.

We never train models on your data without your opt-in. Your data stays isolated from other clients. The code, the models and the accounts are yours.

Getting started. A reply within one business day.

Request a private offer on AWS Marketplace, or write to hello@etheon.com or call +1 (415) 413-3959. A partner reads every brief, not a form queue.

The work runs in your own AWS account. If you incur additional AWS infrastructure costs, separate from your AWS Marketplace transaction, you are responsible for paying those infrastructure charges.
